Caregiven

Caregiven is a digital engagement and support tool offered by care facilities, insurance carriers, health and benefits providers and financial services institutions that addresses the emotional and practical challenges of caring for an aging or ailing loved one for both the care recipient and the caregivers supporting them. Caregiven streamlines all caregiving tasks into a single-point solution that facilitates communication, enables distance caregiving, and empowers more informed decisions, resulting in better health outcomes, reduced costs, and greater peace of mind for everyone involved in the care journey.

iAgeHealth

DUART-5 PTS is a proprietary technology enabled solution delivering a holistic and integrated approach addressing the workforce challenges across the aged care rural and remote health sectors.

Epicure: Australian Aged Care Food and Nutrition Rating

The Lantern Project's Epicure Rating is the only evidence-based comprehensive Australian Aged Care Food and Nutrition Performance Rating. Epicure Rating is designed to rapidly identify strengths and weaknesses across a home's food and nutrition system, map these to the Aged Care Quality Standards and inform targeted solutions to raise the bar on the mealtime experience.

Floor to Form

This project leverages advancements in robotic manufacturing processes to pilot a cradle to cradle approach by reimagining aged care furniture and creating a user-centered design to fabrication workflow in collaboration with industry partners and academia.

HomeGuardian.ai

HomeGuardian.ai is a patented, world first, AI driven behavioural analysis smart home device. It can detect everything from falls, to wandering, to the decline in health and even COVID-19 and Flu like symptoms.

CAREFACTOR TEAMS 2020

Mentia

Our mission is to put best practice dementia care into everyone's hands. We use videogame technology - for tablet - to address the problem of delivering person-centred behavioural and cognitive care, which, traditionally, is expensive, requires specialists, is hard to track, and is difficult to scale.

My Dementia Companion

My Dementia Companion reimagines dementia support to walk family and friend carers through one of life's most complex and challenging journeys.

My Dementia Companion

My Safety Buddy

My Safety Buddy monitors the safety and wellbeing of lone workers. Leveraging innovative smartphone and web portal technology, My Safety Buddy provides a hierarchy of escalating safeguards to enhance safety, meet duty of care and reduce operational costs.

My Safety Buddy™

SiVR Adventures

SiVR Adventures' mission is to tackle isolation and loneliness with seniors by bringing people together through shared experiences in virtual reality and has never been more important.

Our service offers residents of care providers the chance to chat, travel the world and even watch a classic movie with other residents, all in a virtual world.

SiVR Adventures

WeaVR

Immerse yourself in an aged care simulated environment using the WeaVR toolkit. Experience first hand from residents and carers the challenges faced and opportunities to learn through shared experience.
